

Full Size Rotary

for Radial Laser Marking

The full size rotary device can be utilized as an accessory with our laser marking systems to allow a user to mark text or logos radially around the diameter of a part. Our rotary device is equipped standard with a 3-jaw chuck allowing users to grip on the ID or OD of a part. The 3-jaw chuck can easily be replaced with any other type of OEM chuck available on the market. We can also design custom work holding fixtures to be used with our rotary tool device, such as pneumatic clamps, expanding bladder ID grippers and many other options. Riser blocks can be utilized to allow for large diameter marking.

Features

- Radial Part Marking on OD/ID
- 0.1mm Resolution
- Mechanical Key for Chuck Open/Close

Outside Jaws Holding Specifications

OD Clamping	2-30mm
ID Clamping	30-90mm
